

## **Numbers Communication Activity – Teamwork**

1. Put the children in groups of 4-5 and ask the group to assign a leader.
2. Give each set of children a set of flashcards with the numbers 1-10 (see next page) on them. Place them, shuffled, face down on the other side of the gym hall.
3. Explain to the children that from each team, one child at a time will run up and pick up a number and bring in back to their team.
4. Each group has to gather and order the flashcards so that they have all of the numbers 1-10.
5. If a child picks up a card with a number that they already have, they must place it back face down and return to their group empty handed.
6. Encourage the children to communicate with each other to find out the cards that they already have and what they need next. Where have the children already looked and where would be best to look next.
7. How did the winning team work well together?
